

Instructions:

- Due 01/25 at 11:59pm on Gradescope.
- Type your responses to each question.
- Do not put the solutions to multiple problems on the same page.
- Tag your responses on gradescope. Each page should have a *single* problem tag. Improperly tagged responses will not receive credit.

Problem 1.

- Respond to the intro post on Ed. If you do not have access, contact me as soon as possible.
- What percent of the final grade is participation? What do you need to do to get full participation credit?
- Check if you have any conflicts which will force you to miss class. If you do, please let me know now. Examples of common conflicts include midterms for other classes which are scheduled during our class time, standardized tests, religious holidays, etc. Quizzes cannot be made up if you miss class due to a foreseeable absence and did not notify me sufficiently far in advance.

Problem 2. Describe in a few sentences your background with:

- linear algebra
- coding

Problem 3. Tell me about your goals for the class.

- Are there any particular things you are hoping to learn?
- What are you most excited about?
- Is there anything you're nervous about?

Problem 4 (Optional). I would like to get to know you a bit. If you feel comfortable sharing, please answer all or some of the following:

- Attach a photo of yourself (the photos on Albert are usually very old and probably don't like you anymore, which makes it very hard to learn names)
- Is there anything else I should know about you?
